

Fultonham Area Transmission Line Rebuilds Project

AEP Ohio representatives plan power grid upgrades in Perry and Muskingum counties. The project strengthens the local electric system by replacing aging equipment with modern facilities. Crews expect to begin construction in fall 2027 and conclude by fall 2030.

What

The project involves:

- Rebuilding about 25 miles of 69-kilovolt transmission lines between six area substations.
- Replacing deteriorating wooden poles with modern steel poles.

Why

The upgrades:

- Provide customers with safe and reliable electric service.
- Modernize aging equipment from the 1920s and 1950s.
- Minimize the likelihood of future service disruptions and outages.
- Reduce the need for frequent power line maintenance.

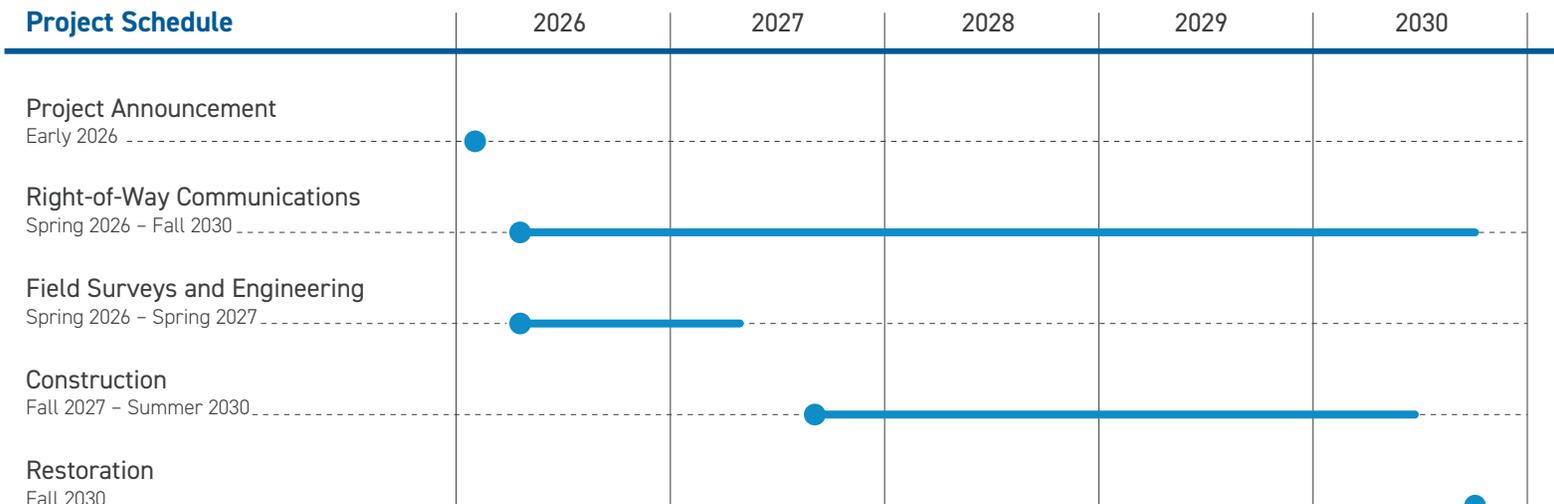

Where

The project area involves:

- Perry and Muskingum counties
- Reading, Clayton, Harrison, Newton, Hopewell townships
- Villages of Somerset, Crooksville and Roseville

Company representatives plan to rebuild a majority of the line in or near its current location. The project may require acquiring easements or updating existing easements in select areas. Easements are defined land rights that provide the utility with access needed to safely build, operate and maintain its power lines.

Project Schedule

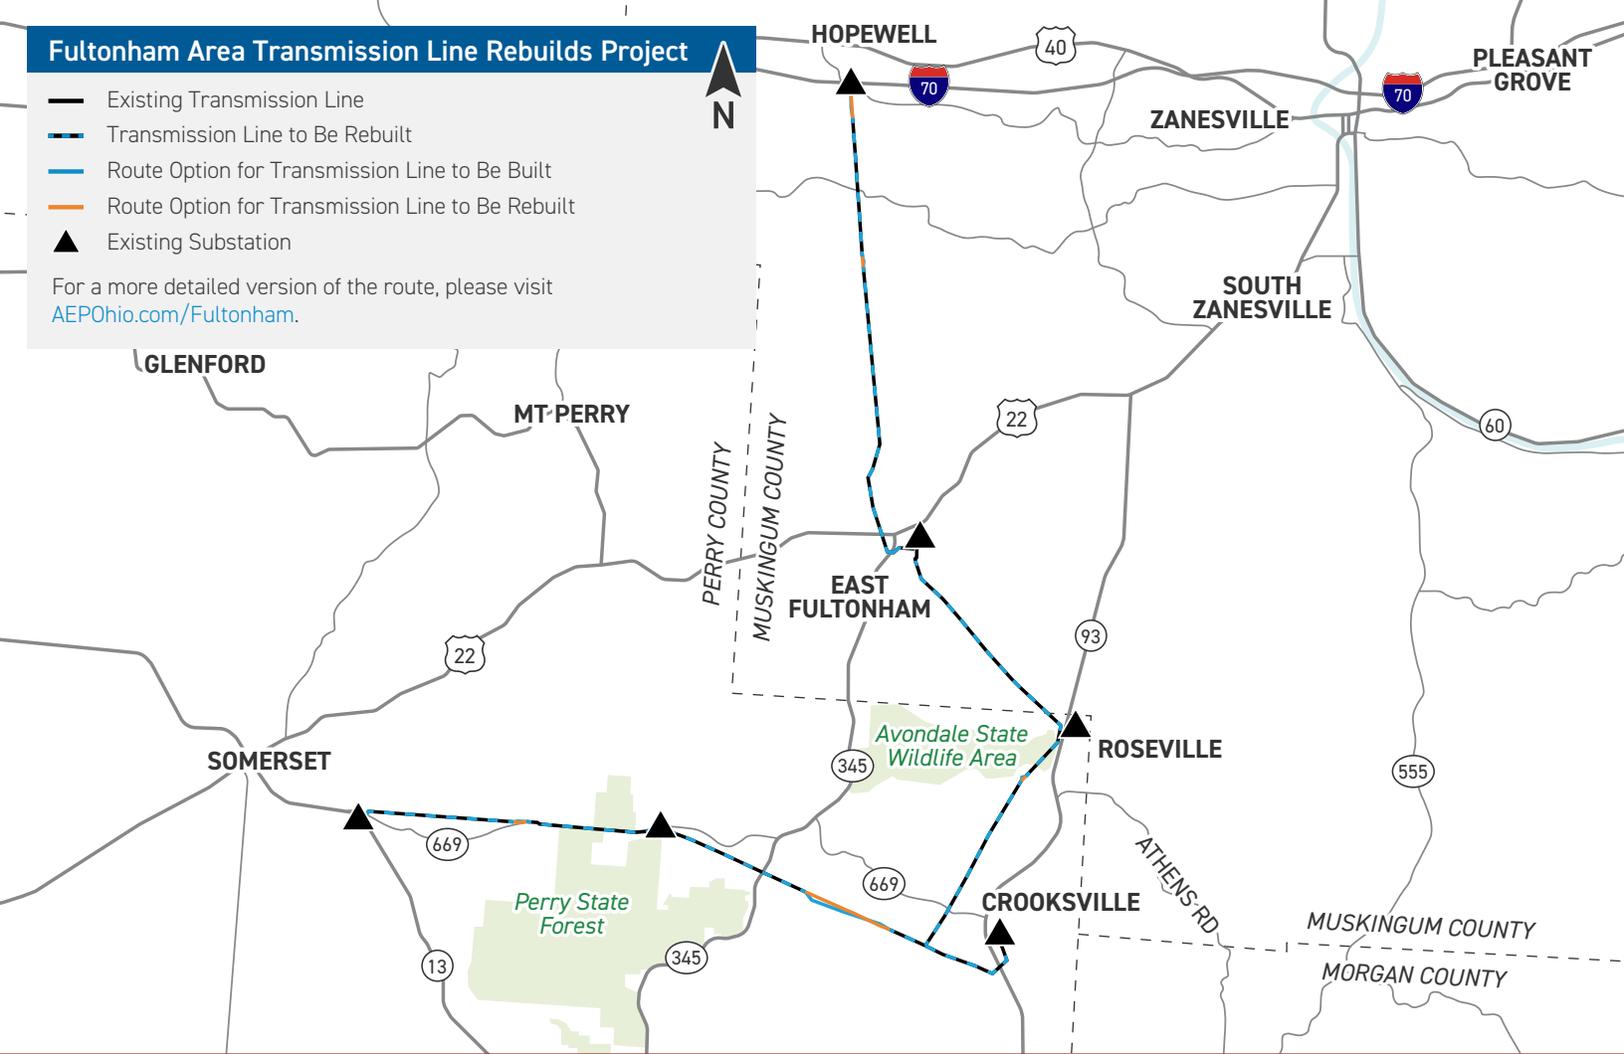

*Timeline subject to change.

Fultonham Area Transmission Line Rebuilds Project

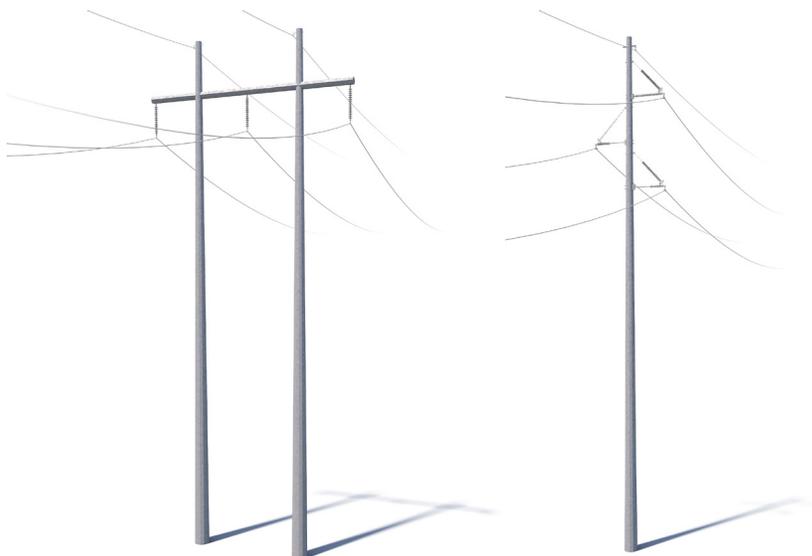

-  Existing Transmission Line
-  Transmission Line to Be Rebuilt
-  Route Option for Transmission Line to Be Built
-  Route Option for Transmission Line to Be Rebuilt
-  Existing Substation

For a more detailed version of the route, please visit AEPOhio.com/Fultonham.

Typical Structures

The project involves the use of steel h-frames and single steel poles.

Pole Height: 60-115 feet*
Right-of-Way Width: 80 feet*

**Exact structure, height, and right-of-way requirements may vary.*
