Appalachian Power plans to improve electric reliability to customers in Carroll County by making upgrades to the local power grid. The West Carroll Substation project will reduce the likelihood of outages and decrease restoration times when outages do occur by providing a second source of power to the area. The construction project includes building a new 138-kilovolt substation and connecting it to an existing transmission line. All of the work will take place on property owned by the company. Construction is expected to start in the spring of 2019 and will be complete by the end of the year.

Substations serve as electrical intersections converting the power to voltage levels for use in homes, businesses and industrial facilities.

*Substation shown is a general depiction of the proposed facilities that will be built for this project. This picture does not represent final design.
